

# Air

Small changes, cleaner air.

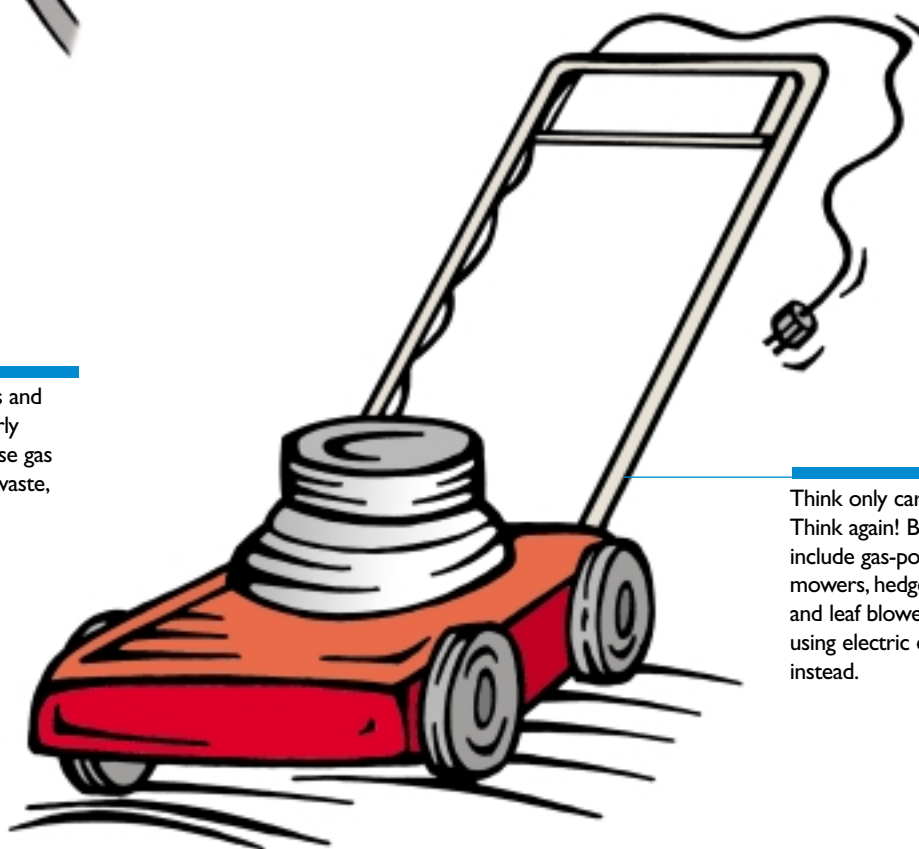

Looking for an air-friendly source of heat? Choose a pellet stove! Even a certified wood stove emits 5 times more pollution than a pellet stove. A fireplace emits 40 times more pollution than a pellet stove.

When getting gas, don't top off the tank. Spillage and evaporation contribute to excess toxic pollutants.

Buy long-life tires and keep tires properly inflated to increase gas mileage, reduce waste, and save money.

Think only cars pollute? Think again! Big polluters include gas-powered lawn mowers, hedge trimmers, and leaf blowers. Consider using electric equipment instead.
